WPEC 2024 2b6: Closing of "The 2nd Day"

A space for open comments about FHE, by the speakers of the day.

Example topics:

1. For several (many?) years, FHE has been considered too slow. What should be the right message today, about FHE feasibility/practicality?

2. Concrete benchmark proposals for each of the type of FHE (exact on bits; exact on integers; approximate)?

3. How far are we (technologically) from being able to have FHE-based private queries to a popular AI agent?
