

# HOW TO DESTROY A DECEPTICON

DESTROYING A DECEPTICON IS NO EASY TASK.  
HERE ARE A FEW WAYS TO OVERCOME YOUR ENEMY.

## 01. MELTDOWN

A highly effective tactic, especially if you happen to have a batch of corrosive chemicals handy. High intensity heat and acid make for a deadly weapon.

The real trick is luring the enemy into the proper positioning directly beneath you. Be warned, once a Decepticon locks on to their target, every second counts.

## 02. BLIND SPOT

When it comes to fighting Decepticons, there are no rules of engagement. If you find yourself with the opportunity to obstruct or destroy your enemy's vision, do not hesitate.

Go for the high ground and assume the sniper-ready position with a plasma rifle. But be warned, a blind Decepticon is still highly dangerous, so be on your guard at all times.

## 03. HEADSHOT

While fairly self-explanatory, for this method of destroying a Decepticon, you'll need two things: agility and stealth.

Study your enemy carefully; you'll only have one shot. For maximum impact and damage, a rocket launcher is highly recommended. Aim for the head and cross your fingers.

## 04. SPARK REMOVAL

Easily the most dangerous method of neutralizing a Decepticon, this one requires Autobot assistance.

Your job: to distract your target just long enough for your Cybertronian ally to take aim with their plasma weapon of choice and blast away directly at the enemy's core.
